# 3G client user manual

## 1. Brief introduction

### 1.1.Outline

This client is a powerful remote console software for vehicle-mounted device, uses a distributed architecture, support multi-window, multi-user, multi-language, voice intercom, compatible with other extended products. Friendly software interface, simple operation, convenient and rigorous permission setting.

This software is used to connect multiple devices of different type, this specification just introduce the software operation, please read related product manual for specific device setting.

This manual is provided for anyone responsible for planning, implementation or review of network video surveillance software hardware installation. You should have the knowledge and experience of the basic operation of the associated equipment.

### 1.2.Environmental requirements

#### 1.2.1. Hardware Requirements

CPU P4/2.0G

RAM bigger than 2G

Graphics card must support hardware scaling(such as ATI, TNT2 PRO)(recommended use the ATI9800 and above graphics, dual-channel) memory 128M / 128bit

Note: If there lots of picture of solution, better configuration of memory, video card, CPU is recommended.NIC 100/1000M

#### 1.2.2. Software Requirements

The software can support the operating systems Windows 2000, Windows XP, Windows Server 2003 and Win7. Turn off all anti-virus software and firewall software before the software installed, in order to ensure the correct installation.

## 2. Install / Uninstall

### 2.1. Client software install

- 1) Double-click "DVRClientSetup.rar" file in CD-ROM, and open the "DVRClientSetup.exe", then pop-up dialog box shown in Figure 2.1.

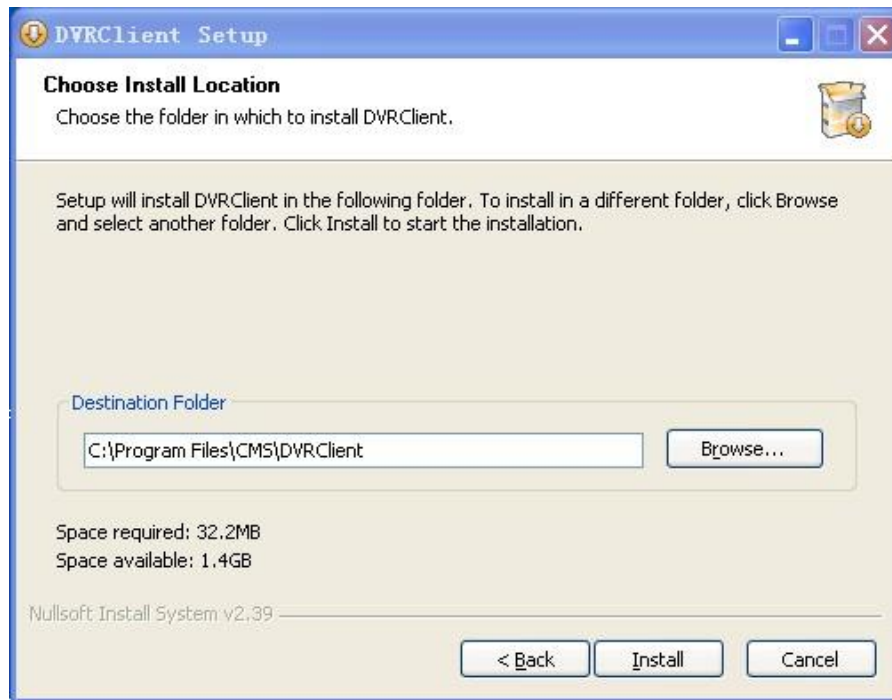

**Figure 2.1**

- 2) Click on the drop-down list box to select the language software use, click 'ok', shown in Figure 2.2.

**Figure 2.2**

- 3) Click "Cancel" to exit the installation, click "Next" to install the software, enter the page shown in Figure 2.3.

**Figure 2.3**

- 4) Click "Cancel" to exit the installation, click Back to return to the previous page, continue the installation as prompts, then successful installation is shown in Figure 2.4.

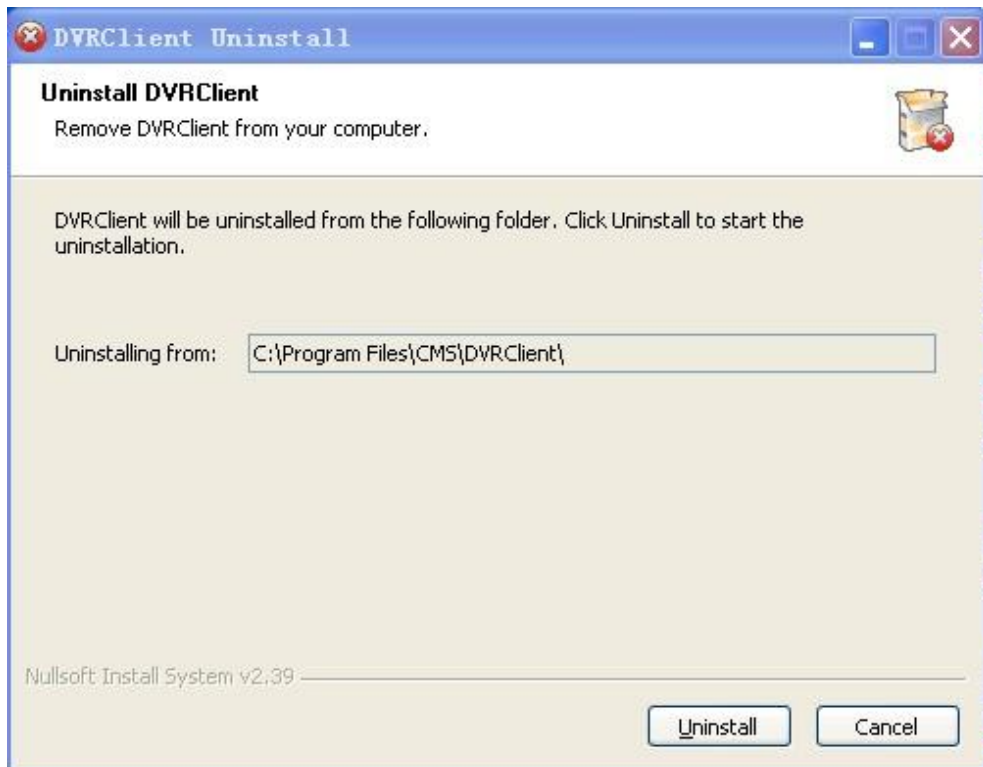

**Figure 2.4**

- 5) Click "Finish", and the installation was successful.

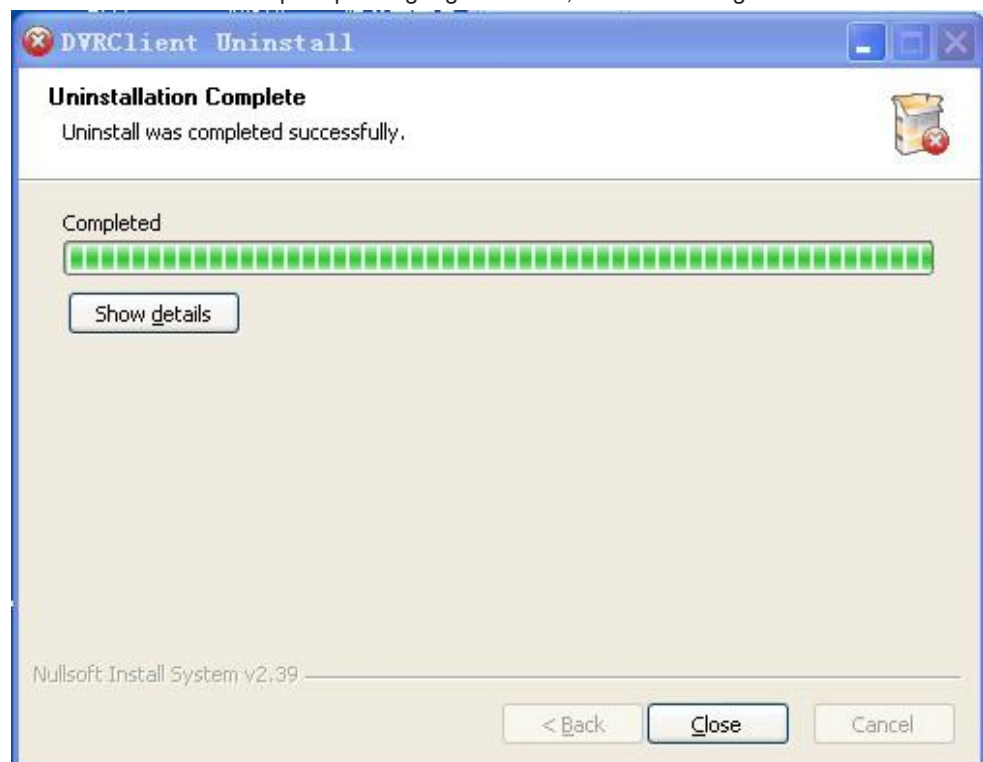

## 2.2.Client software uninstall

- 1) Select the "Start Menu → All Programs → DVR Client → Uninstall", display window as shown in Figure 2.2.1.

**Figure 2.2.1**

- 2) Select uninstall the software prompts language, click the drop-down list box to select the software installation prompts language click 'ok', as shown in Figure 2.2.2.

**Figure 2.2.2**

Click "Cancel" to exit the uninstall, follow the prompts to click to remove the uninstall process, to uninstall successfully display shown in Figure 2.2.2.

- 3) Click "Close", uninstall ends.

### 3. Client software operation

#### 3.1. Client Login

Double-click the shortcut or DVRClient.exe start to run the software. Shown in Figure 3.1.

A Windows-style dialog box titled "Login server". It contains four text input fields: "User Name:" with "admin", "PassWord:" with "\*\*\*\*\*", "Server Address:" with "180.168.202.2", and "Server Port:" with "10000". To the right of the "Server Port" field is a dropdown menu currently showing "English". At the bottom are three buttons: "OK", "Cancel", and a checkbox labeled "Save password" which is checked.

Figure 3.1

**User name and Password:** user name and password for the server settings, not for the client.

**Server IP:** IP address of the PC that service run on.

**server Port:** Control port set in the server program.

#### 3.2. Client main interface and function operation introduction

After a successful login, the main interface shown as Figure 3.2

Figure 3.2

The main interface is rendered as a tab bar, a device list display area, the GPS information display

---

field, PTZ control bar, preview window preview control bar, client log information list.

### 3.2.1. Device list display area

Used to display group and device of the currently logged in user. When users log in, it will automatically detect the device information in this area. Use different icons for online / offline state of equipment.

[Description: Add and Delete operations required the user to set in the server-side device settings.](#)

If the device is online, right-click the device accordingly, the pop-up list includes: language intercom, all open, all closed, offline the equipment.

### 3.2.2. Device information display bar

When the device is offline, the status information bar will display the device name and device status information;

Select the device when the device is online, the status bar shows the device name and hard disk status information;

Select a channel when the device is online, the status bar displays the device name, channel name, equipment, recording status and video loss status;

### 3.2.3. GPS information display bar

When the 3G connection this column will automatically detect the device name, latitude and longitude, direction and speed.

### 3.2.4. PTZ control bar

For remote control PTZ, does not contain preset point and path of the cruise.

### 3.2.5. Preview display window

Live preview window of device channel.

### 3.2.6. Preview control bar

 Introduction of preview buttons:

Number	Button	Meaning
1		"Big-screen preview" button. click the button to preview each channel screen in big screen mode.
2		"4-screen preview" button. click the button to preview each channel in 4 screen mode.
3		"6-screen preview" button. click the button to preview each channel in 6 screen mode.
4		"8-screen preview" button. click the button to preview each channel in 8 screen mode.
5		"9-screen preview" button. click the button to preview each channel in 9 screen mode.

Number	Button	Meaning
6		"13-screen preview" button. click the button to preview each channel in 13 screen mode.
7		"16-screen preview" button. click the button to preview each channel in 16 screen mode.
8		"36-screen preview" button. click the button to preview each channel in 36 screen mode.
9		"64-screen preview" button. click the button to preview each channel in 64 screen mode.
10		"full screen" button. click the button to preview full screen.
11		"clear" button. click the button to clear log information displayed.

Time	Info
2013-02-01 14:17:05	2784 No SD Video Loss(Ch 4)

3.2.8.6. Preview/Map

Shown as figure 3.2.9:

**Figure 3.2.9**

The operation can reference preview and map.

---

## 4. FAQ

### 1) Why there is no image after double click the channel to preview, when the device is online ?

Answer: Can not open the image may 3G network transmission traffic is relatively small, so the client can detect the device on line but can not open the screen. Inspection methods:

View the device 3G network status information, see if the signal value is greater than 28 or not (31 is the max value of the signal, 1 is the smallest one, 99 indicates no signal is detected);

When open preview on PC side client, if there is increase in network traffic or not, if not, that indicates the data was not transfer to the PC side, so there is no image;

### 2) Why GPS offset relatively large or display the wrong place?

Answer: Generally GPS offset 10 meters, when occasionally occur within 200 meters of offset is normal, if it reaches 500 meters above, see if the GPS data conversion option is chosen in client; It have to be chosen inland, abroad do not need to choose this option, or there will be a large deviation of GPS value.
